TOWARDS ADAPTIVE ANOMALY DETECTION AND ROOT
CAUSE ANALYSIS BY AUTOMATED EXTRACTION OF
KNOWLEDGE FROM RISK ANALYSES

BRAM STEENWINCKEL

Passenger comfort level

Passenger
comfort
level

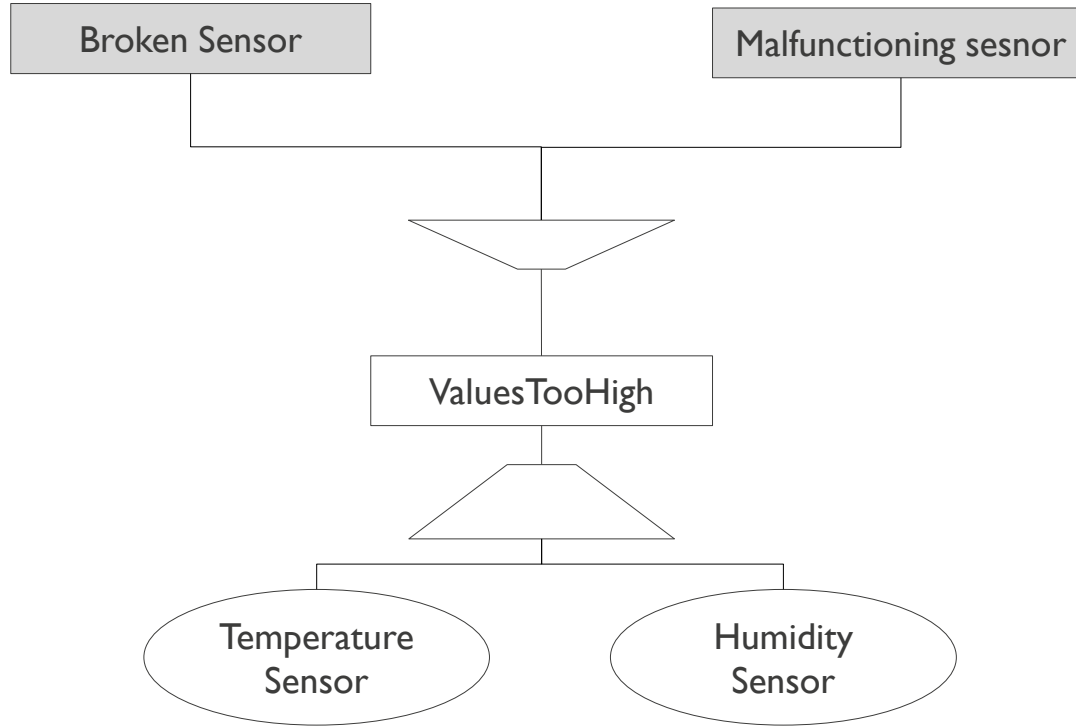

DOMAIN SPECIFIC KNOWLEDGE DEFINES THE BEHAVIOURS

FAILURE MODE AND EFFECT ANALYSIS (FMEA)

Component	Function	Failure Mode	Failure Effect	Failure Cause	Control Method	Containment Action
Passenger Comfort unit	Detects the level of comfort	False warning	Indicating an impossible comfort level	Broken sensor	None	None
Temperature Sensor	Measures the temperature of the wheels	Values too high	Broken sensor	Degradation of the sensor	None	Replace sensor
			Malfunctioning sensor	Rapid temperature changes	None	Calibrate sensor
Humidity sensor	Measures the outside humidity	Values too high	Broken sensor	Degradation of the sensor	None	Replace sensor
			Malfunctioning sensor	Rapid temperature changes	None	Calibrate sensor

DOMAIN SPECIFIC KNOWLEDGE DEFINES THE BEHAVIOURS

FAULT TREE ANALYSIS (FTA)

PROBLEM...

Two common risk analysis procedures: FMEA & FTA

- Experts with different view on the system
- Ambiguities
- Inconsistencies

Ontology design

PROBLEM...

Domain expert \neq Ontology expert

SOLUTION

Knowledge

Ontology + Rules

SOLUTION

FMEA tables

Domain ontology

FTA tree

Semantic rules

FMEA MAPPING APPROACH

FMEA MAPPING APPROACH

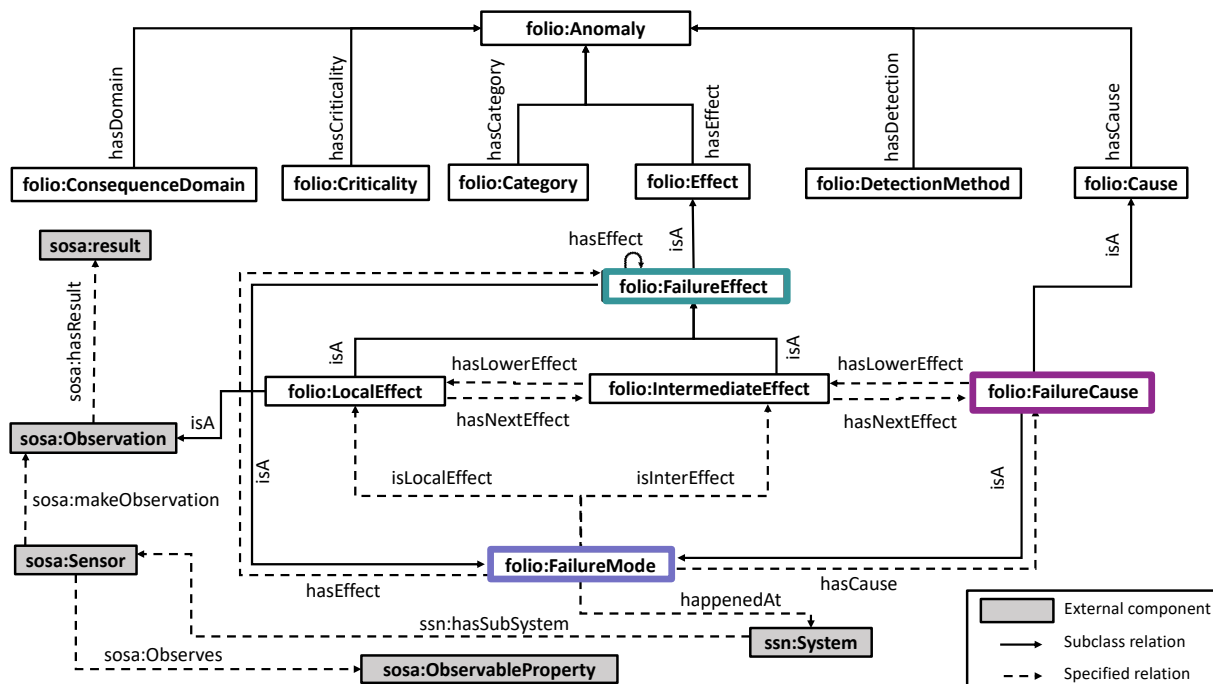

Component	Function	Failure Mode	Failure Effect	Failure Cause	Control Method	Containment Action
Passenger Comfort unit	Detects the level of comfort	False warning	Indicating an impossible comfort level	Broken sensor	None	None
Temperature Sensor	Measures the temperature of the wheels	Values too high	Broken sensor	Degradation of the sensor	None	Replace sensor
			Malfunctioning sensor	Rapid temperature changes	None	Calibrate sensor
Humidity sensor	Measures the outside humidity	Values too high	Broken sensor	Degradation of the sensor	None	Replace sensor
			Malfunctioning sensor	Rapid temperature changes	None	Calibrate sensor

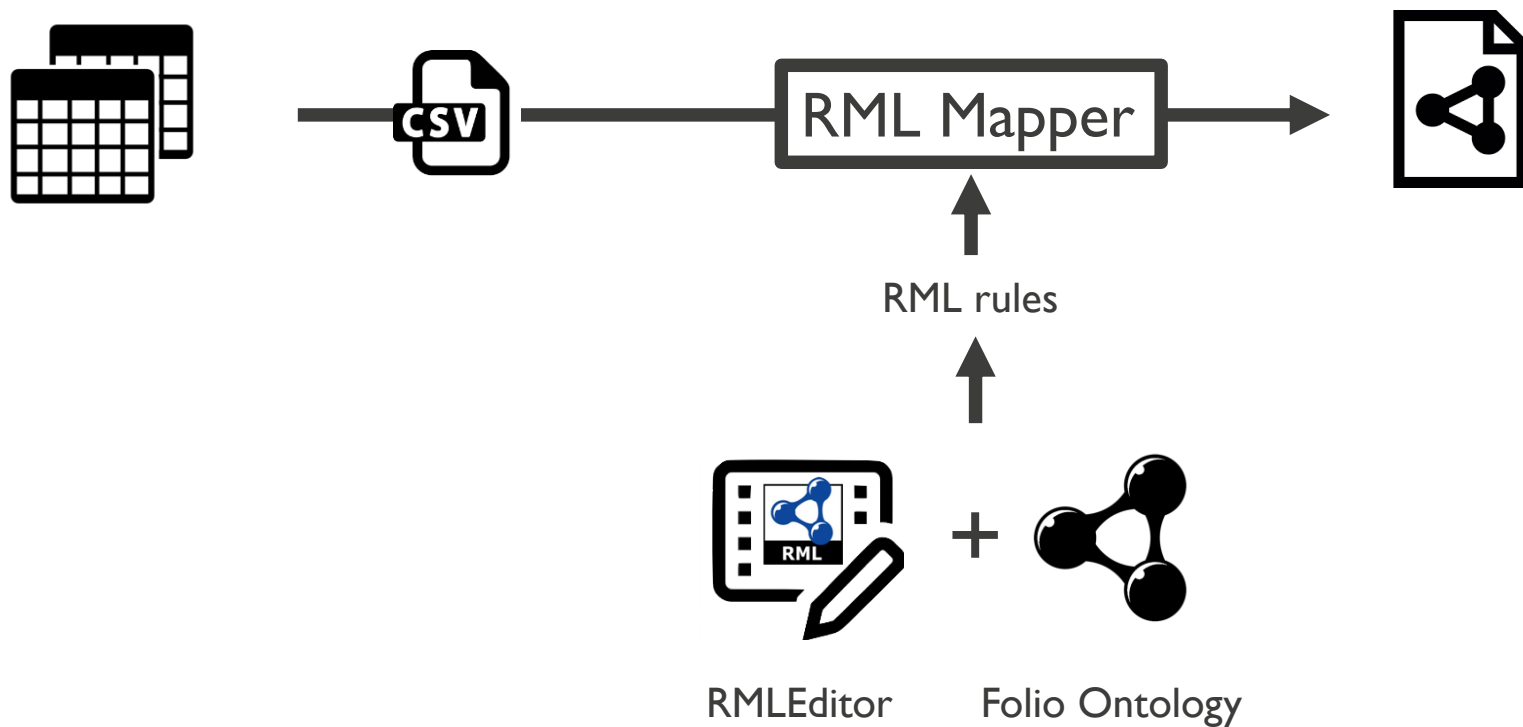

FMEA MAPPING APPROACH

FOLIO ONTOLOGY

Component	Function	Failure Mode	Failure Effect	Failure Cause	Control Method	Containment Action
-----------	----------	--------------	----------------	---------------	----------------	--------------------

FMEA MAPPING APPROACH

FMEA MAPPING APPROACH

EXAMPLE:

Component	Function	Failure Mode	Failure Effect	Failure Cause	Control Method	Containment Action
Temperature Sensor	Measures the temperature of the wheels	Values too high	Broken sensor	Degradation of the sensor	None	Replace sensor

New Concepts

- ValuesTooHigh is a folio:FailureMode
- BrokenSensor is a folio:FailureEffect
- DegradationOfTheSensor is a folio:FailureCause

FMEA MAPPING APPROACH

UPDATABILITY OF APPROACH?

FMEA MAPPING APPROACH

UPDATABILITY OF APPROACH?

- What if expert adds additional failure information?

FMEA MAPPING APPROACH

UPDATABILITY OF APPROACH?

- What if expert adds additional failure information?

Component	Function	Failure Mode	Failure Effect	Failure Cause	Control Method	Containement Action
Passenger Comfort unit	Detects the level of comfort	False warning	Indicating an impossible comfort level	Broken sensor	None	None
Temperature Sensor	Measures the temperature of the wheels	Values too high	Broken sensor	Degredation of the sensor	None	Replace sensor
			Malfunctioning sensor	Rapid temperature changes	None	Calibrate sensor
		Values stay the same	Malfunctioning sensor	Frozen sensor	None	None
Humidity sensor	Measures the outside humidity	Values too high	Broken sensor	Degredation of the sensor	None	Replace sensor

FMEA MAPPING APPROACH

UPDATABILITY OF APPROACH?

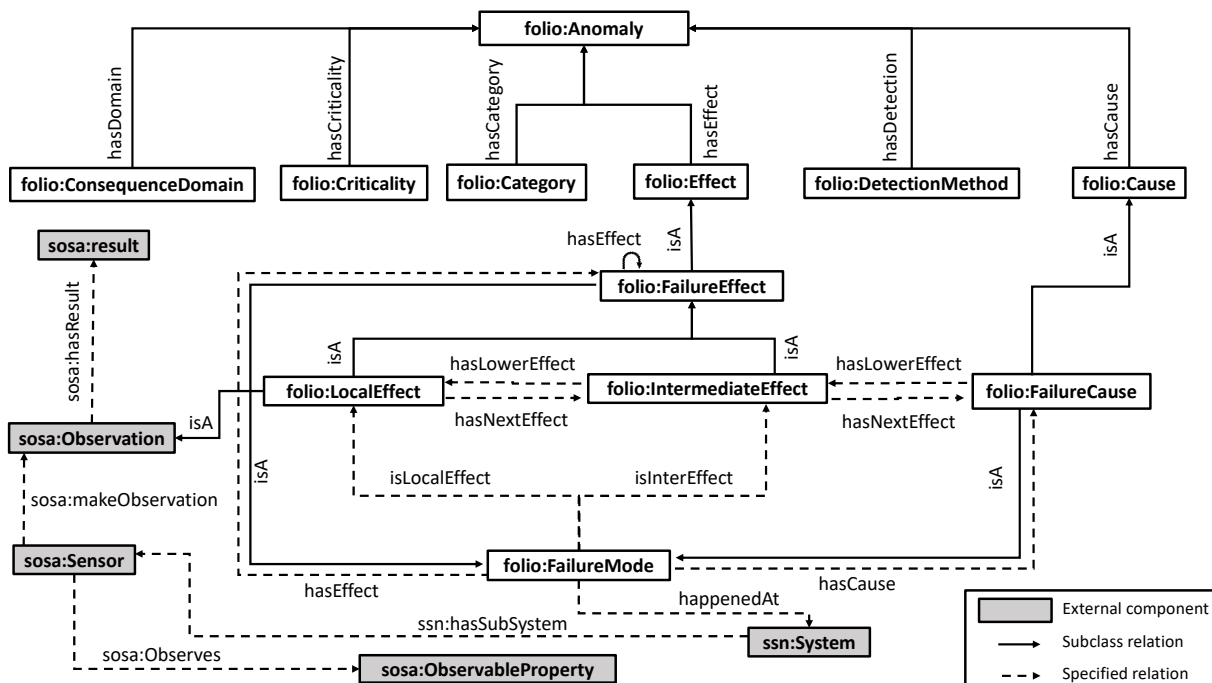

- What if extra information from the FMEA template becomes important?

FMEA MAPPING APPROACH

UPDATABILITY OF APPROACH?

- What if extra information from the FMEA template becomes important?

Component	Function	Failure Mode	Failure Effect	Failure Cause	Control Method	Containement Action	Criticality
-----------	----------	--------------	----------------	---------------	----------------	---------------------	-------------

SUMMARY & CONCLUSION

APPROACH

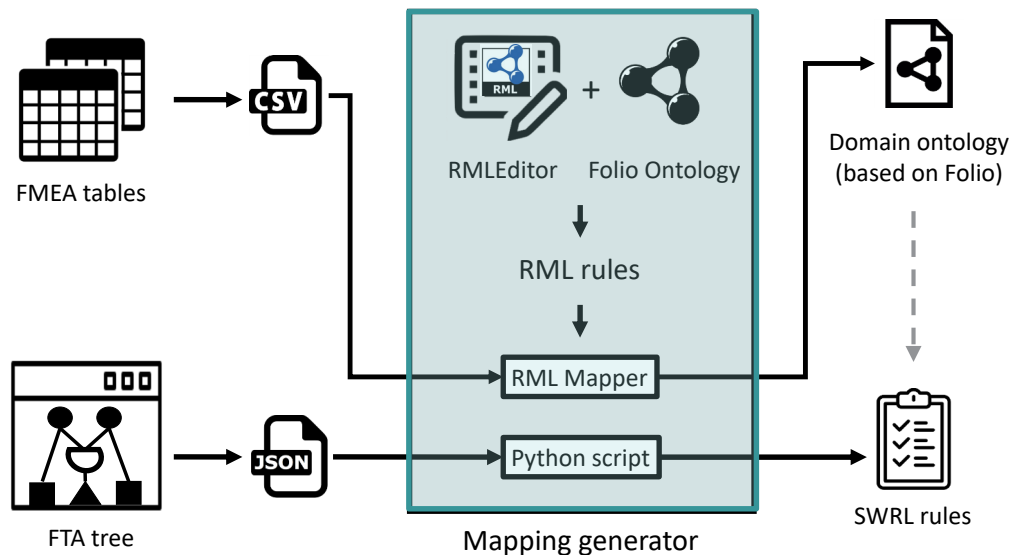

APPROACH

DOMAIN EXPERT RESPONSABILITY

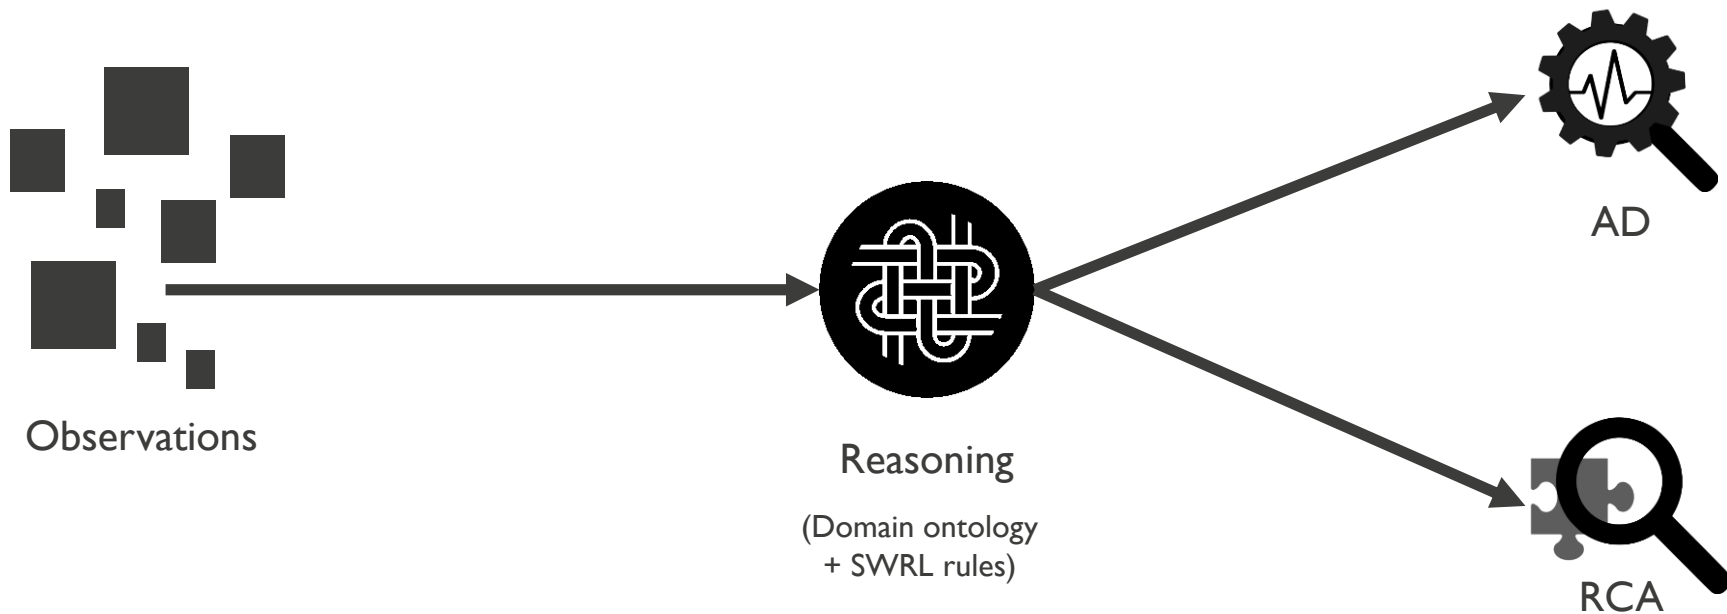

APPROACH

ONTOLOGY EXPERT RESPONSABILITY

RESULT

FUTURE WORK

- Use risk analysis to provide semantic AD and RCA
- Rules from expert information reasoning
- Broader scope than current FMEA and FTA analysis

THANK YOU FOR LISTENING

- Interested?

The whole approach will be demonstrated using a ventilation use case on 11 October!
